

Empowering vulnerable community to clean up existing drainage and cover them up with grid and also to add more drainages

Objective of the project

To mitigate flood by making drainage and covering them up with grids and also adding more drainages to existing ones.

Problem addressed

Flooding due to the climate crisis has destroyed many farmlands and their crops, houses were also swallowed up by the water and many people were displaced in Nigeria in the year 2022.

Solution proposed

To make drainage and cover them up with grids, also to empower the community members to clean up existing drainage and cover them up with grids in this way water will flow freely without any obstacle.

Expected impacts

The flood will reduce and people will not have to be displaced because of flood, their farmlands and crops will be safe from flood, their buildings as well.

Current state of development and What is the project looking for?

Prototyping and seeking ways to engage stakeholders.
